## The problem: Noisy Restaurants

The restaurateur spends a considerable amount of time and money creating an enticing environment designed to enhance the diners' experience.

All too often, once the room fills with customers, this pleasant ambience is totally ruined by excessive levels of reflected sound.

Diners are forced to compete with the ambient noise in the room to make themselves heard; the sound level increases; and the start of a vicious circle of increasing noise is complete.

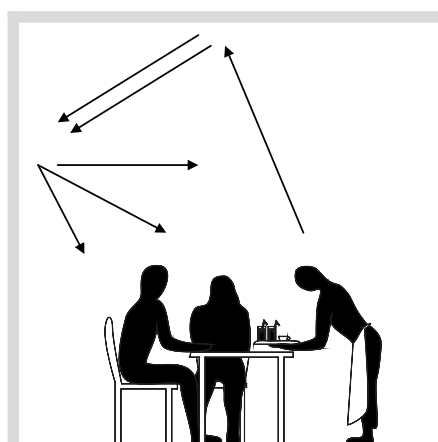

## The solution: Quietshapes™ Quietstone's Sound Absorption panels.

A decorative sound absorptive surface designed to reduce noise reflection (echo). This reduction in echo, in turn lowers the sound level in the room to a comfortable level.

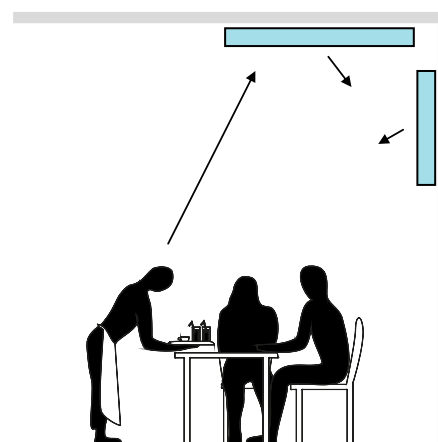

### Our Mission:

We want to help you create an enjoyable environment using our beautiful and stylish Acoustic Panels.

We aim to finally provide the restaurateur with a cost effective solution to unwanted noise and reverberation, thus maintaining a pleasant ambience within your restaurant, and increasing the comfort of the diners.

Poor Acoustics
